Inductive Proximity Switches

Built for extreme conditions

Inductive Proximity Switches are solid state switching devices which require no physical contact to actuate them

Used for control and positioning signals, they can be connected directly into conventional or electronic control systems. The need for such switching devices has increased in recent times as manufacturing plants, as well as machines in general have become more automated. The combination of high quality materials and advanced technology in the construction of these switches ensures a very high degree of precision and reliability under the most arduous conditions.

The main advantages for inductive proximity switches are :

exceptionally **long life** and **high switching speeds** (up to 5 million per hour) ;

no-touch, zero, operation force (no actuator or plunger required) ;

wear and maintenance free operation (solid state, no moving parts) ;

bounce free signals (no spurious signals through contact bounce) ;

reliable switching under extreme conditions.

Fully waterproof (insensitive to strong vibrations, dirty environments, rapid temperature changes).

The Switch Concept. Design, Function and Definitions.

Design and Function. : The electronic Inductive Proximity switch comprises of three principle Parts :

1) The oscillator. 2) A trigger stage and 3) amplifier stage (see figure 1)

The Oscillator generates, with its coil, a high frequency electromagnetic field of approximately spherical distribution. Any metallic object introduced into this field absorbs energy from the oscillator by induced eddy currents. This reduces the amplitude of the oscillations and this change triggers the out put stage. **This type of oscillator will respond to any type of metal.**

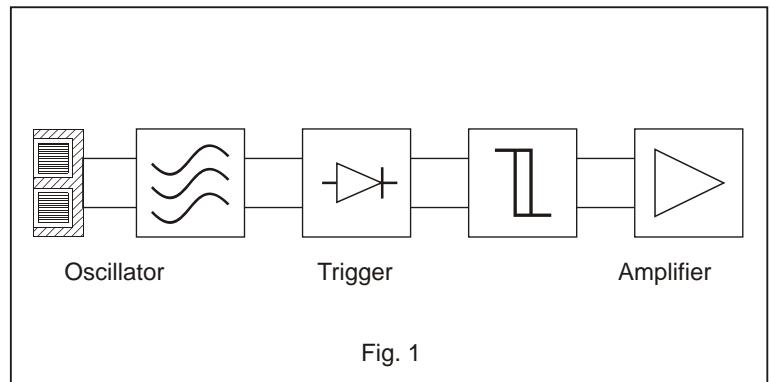

Fig. 1

Definitions :

Sensing Face. : The sensing face of an inductive proximity switch is the surface from which the electromagnetic field radiates. The sensing faces of inductive proximity switches are clearly marked with a system of colours or rings.

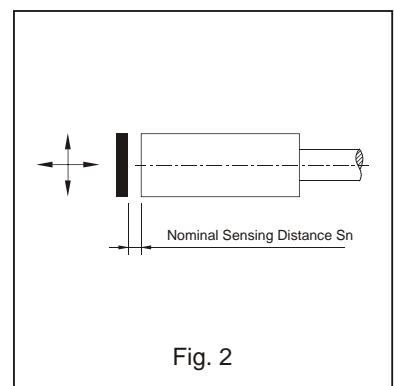

Fig. 2

Sensing Distances.

The sensing distance is the maximum distance between the target and the sensing face to be sure of obtaining a switching signal. This distance is measured using a square mild steel (St 37) target 1 mm in thickness. The sides of the square target should be equal to the diameter of the sensing face of the inductive proximity switch (EN 50 010).

The Nominal sensing distance Sn is a reference dimension only and does not take into account temperature or voltage variations.

The Effective sensing distance Sr is the distance measured at nominal voltage and ambient temperature. ($0.9 \text{ Sn } \text{Sr } 1.1 \text{ Sn}$)

The Usable sensing distance S measured within a given voltage and temperature range. ($0.9 \text{ Sr } \text{S } 1.1 \text{ Sr}$)

The Working sensing distance is every sensing distance which guarantees operation under given temperature and voltage conditions. This distance can be selected between 0 and the usable sensing distance.

Inductive Proximity Switches

Reduction Factor.

If the target of the inductive proximity switch is manufactured from a material other than mild steel (St 37) or if the target varies in thickness and area from the standard target, then the sensing distance will vary.

Material	Reduction Factor
Steel (St.37)	1.0
Brass	0.35...0.5
Copper	0.25...0.45
Aluminium	0.35...0.5
Stainless Steel	0.60...1.0

Repeat Accuracy.

The repeat accuracy is the reproduction accuracy between two successive operations under the same ambient conditions.

Switch Hysteresis.

The Switch hysteresis is the difference between the switch ON point, when the target approaches the sensing face of the inductive proximity switch and the switch OFF point, when the target moves away from the sensing face. (see fig.3). The graphs shown in figure 4 indicate the Switch ON and Switch OFF points of various switches when the target approaches the switch in a radial direction in relation with the axial distance of the target from the sensing face.

Temperature Drift.

The temperature drift is the change in switch point in m/K due to variations in ambient temperature conditions when all other conditions remain constant.

Installation.

Inductive proximity switches are suitable for **flush fitting** or **non-flush fitting**.

Flush Fitting. Inductive proximity switches intended for flush fitting are not affected by surrounding metal and can be installed immediately adjacent to metal surfaces. (see figure 5)

Non-flush fitting. Inductive proximity switches not intended for flush fitting can be affected by surrounding metal surfaces and must be installed with a metal free zone or non-damping material adjacent to the sensing face. (see figure 6)

Important Fitting Instructions.

Inductive proximity switches with threaded housings are clamped in position using two nuts. If these nuts are over tightened it is possible to damage the switch housing.

For this reason care should be taken that tightening torques mentioned below should not be exceeded.

Models	Max. Tightening Torque (Nm)
EGT08	12
EGT12	28
EGT18	40
EGT30	40

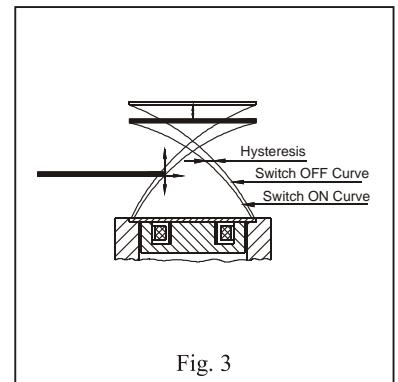

Fig. 3

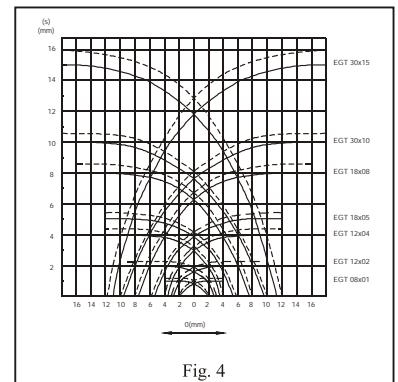

Fig. 4

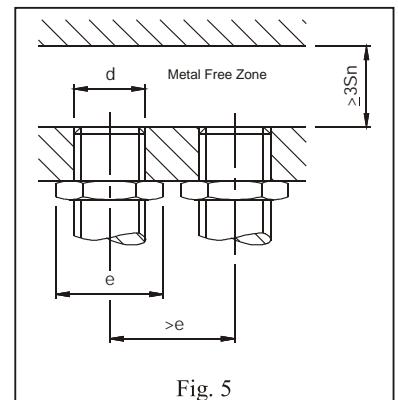

Fig. 5

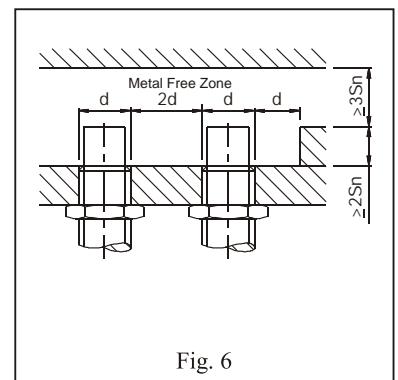

Fig. 6

The Inductive Proximity Switch in Practice Electrical Characteristics.

Voltages.

Inductive proximity switches are designed for AC or DC operation. Refer to technical data in this catalogue for specific details of voltages ranges for the individual switch types.

The operating voltage is the voltage which can be used to operate the inductive proximity switch.

Note : Two wire proximity switches must only be used in series with the load.

Inductive Proximity Switches

The Voltage Drop U_d is the voltage measured between the energized output and the switched potential at the rated current I_a of the switch

Ripple voltage.

The ripple voltage is the AC voltage U_{br} (peak to peak) superimposed on the mean DC voltage U expressed as a percentage. (see figure 7) The provision of smooth DC supply within 10% (to DIN 41755) maximum ripple is absolutely essential for effective operation DC switches. When using a single phase rectified supply the appropriate smoothing capacitor should be used.

$$U_{br}/U \cdot 100 [\%]$$

Currents.

The Load Current I_a is the maximum current at which the inductive proximity switch can be continuously operated.

The Inrush Current I_k is the maximum current which can flow, from the moment that the switch is on, for a specified time.

The No-load Current is the current consumed by the switch at the maximum operating voltage without there being any external load current.

The Residual Current I_r is the current which flows through the load even when the switch is in its blocked state. In practice this is only to be considered for two wire switches.

Holding Current I_h is the least current necessary to ensure correct functioning of an actuated 2 Wire switch.

Switch frequency.

The Switch frequency is the maximum number of switching functions per second. The method of measurement must conform to EN 50010. Refer to the technical data in this catalogue which indicates the maximum switching frequencies for each individual type of switch.

The methods of protection.

Inductive proximity switches have an environmental protection to IP67 to DIN 40050. The following methods protection ensure particularly reliable operation for all users of inductive proximity switches.

The short circuit protection. Switches with built-in short circuit and overload protection are protected against damage to the output stage. Pulsed short circuit protection is used in which the output transistor is switched OFF and ON in quick succession. This enables the switch to function normally on removal of the short circuit condition.

Reverse polarity protection. The inductive proximity switches are protected against damage due to inverted supply line connection.

The transient voltage protection. Inductive proximity switches are protection against damage caused by supply line transient voltages. In order to prevent unusually high transient voltages which can destroy the switch or activate the short circuit protection, the supply line should be separated from cables which carry high currents for motors, clutches and magnets. If in doubt, please contact our technical personnel.

Power Supply.

The provision of a smoothed D.C. operating voltage with a maximum ripple of 10% is essential for the effective operation of D.C. proximity switches. The circuit shown in figure 8 is a suggestion for loads up to 1000mA.

Load Current (mA)	C rating in F
200	1000
500	2200
1000	4700

Testing Suggestions : When testing inductive proximity switches, normal filament lamps must never be used without an additional series resistor. This is important because when a filament lamp is cold it has a very low resistance and hence a high inrush current. This can destroy the proximity switch. We recommend for testing a voltmeter or preferably an oscilloscope.

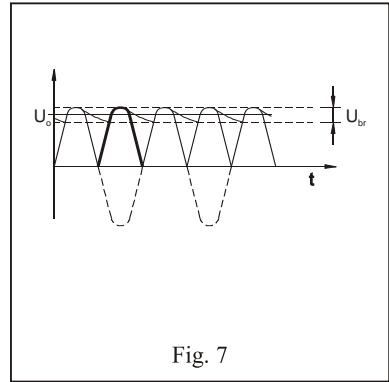

Fig. 7

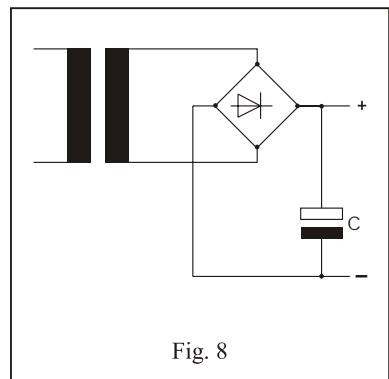

Fig. 8

Inductive Proximity Switches

Series and Parallel Connection of Proximity Switches :

Series Connection of 3 and 4 Wire DC switches (AND Logic) : Used when it is necessary to obtain two or more corresponding signals before an action is carried out. It is necessary to take into account the voltage drop U_d present at the output of each switch which will reduce the voltage available at the load correspondingly.(see fig.9)

Parallel Connection of 3 and 4 Wire DC switches (OR Logic) : Used when any one of the switches are required to activate the load. (see fig.10)

Series Connection of 2 Wire AC and DC switches (AND Logic) : see note above for Series connection of 3 and 4 wire switches.(see fig.11)

Parallel Connection of 2 Wire AC and DC switches (OR Logic) : It is necessary to take into account the cumulative no-load currents of each of the switches which would flow through the Load in the unactuated condition of the switch. This could under circumstances trigger off the load without actually operating the switch.(see fig.12)

Switching Frequency (Hz)	1000						
Output Polarity	PNP	NPN					
Output Function	A=NO	U=NO+NC	A=NO	U=NO+NC			
Connection Diagram	1	3	2	4			
Short Circuit Protection	yes	yes	yes	yes			
Status Indication	LED (see ordering code)						

Inductive Proximity Switches

Cylindrical Housing M18 x 1 EGL Version 3 Wire D.C. Extended Switching Distance							
Technical Data	Type : EGL18B08						
	DC Operating Voltage						
Housing Material	Brass Nickel Plated						
Environmental Protection	IP67						
Mounting Position	Optional						
Operating Temperature (deg.C)	-25 to +70						
Connection	Encapsulated Oil Resistant Cable						
Cable Length (mm)	2000 or 5000						
Conductor Cross Section (mm ²)	0.34						
Sensing Distance Sn (mm)	Flush Fitting = 8						
Switch Point Hysteresis H (mm)	0.8						
Repeat Accuracy (mm)	0.4						
Operating Voltage (V)	10-30						
Operating Voltage Ripple (%)	10						
Load Current Ia (mA) max	200						
Residual Current Ir (mA)	0.001						
No-Load Current (mA)	15						
Voltage Drop Ud (V)	2.5						
Internal Resistance Ri (K)	4.7						
Temperature Drift S (µm/K)	± 12						
Switching Frequency (Hz)	500						
Output Polarity	PNP	NPN					
Output Function	A=NO	U=NO+NC	A=NO	U=NO+NC			
Connection Diagram	1	3	2	4			
Short Circuit Protection	yes	yes	yes	yes			
Status Indication	LED (see ordering code)						

Cylindrical Housing M18 x 1 EGL Version 3 Wire D.C. Extended Switching Distance							
Technical Data	Type : EGL18B08-SEM4						
	DC Operating Voltage						
Housing Material	Brass Nickel Plated						
Environmental Protection	IP67						
Mounting Position	Optional						
Operating Temperature (deg.C)	-25 to +70						
Connection	Plug and Socket						
Cable Length (mm)	-						
Conductor Cross Section (mm ²)	-						
Sensing Distance Sn (mm)	Flush Fitting = 8						
Switch Point Hysteresis H (mm)	0.8						
Repeat Accuracy (mm)	0.4						
Operating Voltage (V)	10-30						
Operating Voltage Ripple (%)	10						
Load Current Ia (mA) max	200						
Residual Current Ir (mA)	0.001						
No-Load Current (mA)	15						
Voltage Drop Ud (V)	2.5						
Internal Resistance Ri (K)	4.7						
Temperature Drift S (µm/K)	± 12						
Switching Frequency (Hz)	500						
Output Polarity	PNP	NPN					
Output Function	A=NO	U=NO+NC	A=NO	U=NO+NC			
Connection Diagram	1	3	2	4			
Short Circuit Protection	yes	yes	yes	yes			
Status Indication	LED (see ordering code)						

Inductive Proximity Switches

Cylindrical Housing M30 x 1.5 EGL Version 3 Wire D.C. Standard Switching Distance		
	Type : EGL30X10	Type : EGL30X15
Technical Data	DC Operating Voltage	DC Operating Voltage
Housing Material	Brass Nickel Plated	Brass Nickel Plated
Environmental Protection	IP67	IP67
Mounting Position	Optional	Optional
Operating Temperature (deg.C)	-25 to +70	-25 to +70
Connection	Encapsulated Oil Resistant Cable	Encapsulated Oil Resistant Cable
Cable Length (mm)	2000 or 5000	2000 or 5000
Conductor Cross Section (mm ²)	0.34	0.34
Sensing Distance Sn (mm)	Flush Fitting = 10	Non-Flush Fitting = 15
Switch Point Hysteresis H (mm)	1.0	1.5
Repeat Accuracy (mm)	0.5	1.0
Operating Voltage (V)	10-30	10-30
Operating Voltage Ripple (%)	10	10
Load Current Ia (mA) max	250	250
Residual Current Ir (mA)	0.001	0.001
No-Load Current (mA)	15	15
Voltage Drop Ud (V)	2.5	2.5
Internal Resistance Ri (K)	4.7	4.7
Temperature Drift S ($\mu\text{m}/\text{K}$)	± 20	± 30
Switching Frequency (Hz)	300	300
Output Polarity	PNP	NPN
Output Function	A=NO U=NO+NC	A=NO U=NO+NC
Connection Diagram	1 3	2 4
Short Circuit Protection	yes	yes
Status Indication	LED (see ordering code)	LED (see ordering code)

Cylindrical Housing M30 x 1.5 EGL Version 3 Wire D.C. Standard Switching Distance		
	Type : EGL30X10-SEM4	Type : EGL30X15-SEM4
Technical Data	DC Operating Voltage	DC Operating Voltage
Housing Material	Brass Nickel Plated	Brass Nickel Plated
Environmental Protection	IP67	IP67
Mounting Position	Optional	Optional
Operating Temperature (deg.C)	-25 to +70	-25 to +70
Connection	Plug and Socket	Plug and Socket
Cable Length (mm)	-	-
Conductor Cross Section (mm ²)	-	-
Sensing Distance Sn (mm)	Flush Fitting = 10	Non-Flush Fitting = 15
Switch Point Hysteresis H (mm)	1.0	1.5
Repeat Accuracy (mm)	0.5	1.0
Operating Voltage (V)	10-30	10-30
Operating Voltage Ripple (%)	10	10
Load Current Ia (mA) max	250	250
Residual Current Ir (mA)	0.001	0.001
No-Load Current (mA)	15	15
Voltage Drop Ud (V)	2.5	2.5
Internal Resistance Ri (K)	4.7	4.7
Temperature Drift S ($\mu\text{m}/\text{K}$)	± 20	± 30
Switching Frequency (Hz)	300	300
Output Polarity	PNP	NPN
Output Function	A=NO U=NO+NC	A=NO U=NO+NC
Connection Diagram	1 3	2 4
Short Circuit Protection	yes	yes
Status Indication	LED (see ordering code)	LED (see ordering code)

Inductive Proximity Switches

Rectangular Housing Flat Profile FG2 Version 3 / 4 Wire D.C. Standard Switching Distance				
Technical Data	Type : FG2X05			
	DC Operating Voltage			
Housing Material	Plastic			
Environmental Protection	IP67			
Mounting Position	Optional			
Operating Temperature (deg.C)	-25 to +70			
Connection	Encapsulated Oil Resistant Cable			
Cable Length (mm)	2000 or 5000			
Conductor Cross Section (mm ²)	0.34			
Sensing Distance Sn (mm)	5			
Switch Point Hysteresis H (mm)	0.5			
Repeat Accuracy (mm)	0.2			
Operating Voltage (V)	10-30			
Operating Voltage Ripple (%)	10			
Load Current Ia (mA) max	250			
Residual Current Ir (mA)	0.001			
No-Load Current (mA)	15			
Voltage Drop Ud (V)	2.5			
Internal Resistance Ri (K)	4.7			
Temperature Drift S ($\mu\text{m}/\text{K}$)	± 10			
Switching Frequency (Hz)	500			
Output Polarity	PNP	NPN		
Output Function	A=NO	U=NO+NC	A=NO	U=NO+NC
Connection Diagram	1	3	2	4
Short Circuit Protection	yes	no	yes	no
Status Indication	LED (see ordering code)			

Rectangular Housing Flat Profile FG4 Version 3 Wire D.C. Standard Switching Distance						
Technical Data	Type : FG4X02	Type : FG41X02				
	DC Operating Voltage	DC Operating Voltage				
Housing Material	Plastic	Plastic				
Environmental Protection	IP67	IP67				
Mounting Position	Optional	Optional				
Operating Temperature (deg.C)	-25 to +70	-25 to +70				
Connection	Encapsulated Oil Resistant Cable	Encapsulated Oil Resistant Cable				
Cable Length (mm)	2000 or 5000	2000 or 5000				
Conductor Cross Section (mm ²)	0.34	0.34				
Sensing Distance Sn (mm)	2	2				
Switch Point Hysteresis H (mm)	0.2	0.2				
Repeat Accuracy (mm)	0.1	0.1				
Operating Voltage (V)	10-30	10-30				
Operating Voltage Ripple (%)	10	10				
Load Current Ia (mA) max	250	250				
Residual Current Ir (mA)	0.001	0.001				
No-Load Current (mA)	15	15				
Voltage Drop Ud (V)	2.5	2.5				
Internal Resistance Ri (K)	4.7	4.7				
Temperature Drift S ($\mu\text{m}/\text{K}$)	± 4	± 4				
Switching Frequency (Hz)	500	500				
Output Polarity	PNP	NPN	PNP	NPN		
Output Function	A=NO		A=NO		A=NO	
Connection Diagram	1	2	1	2		
Short Circuit Protection	yes	yes	yes	yes		
Status Indication	LED (see ordering code)				LED (see ordering code)	

Inductive Proximity Switches

Block Housing Flat Profile N1A Version 3 / 4 Wire D.C. Standard Switching Distance		
---	--	--

Technical Data	Type : N1AX05			
	DC Operating Voltage			
Housing Material	Aluminium Casting , Anodised			
Environmental Protection	IP67			
Mounting Position	Optional			
Operating Temperature (deg.C)	-25 to +70			
Connection	Encapsulated Oil Resistant Cable			
Cable Length (mm)	2000 or 5000			
Conductor Cross Section (mm ²)	0.34			
Sensing Distance Sn (mm)	5			
Switch Point Hysteresis H (mm)	0.5			
Repeat Accuracy (mm)	0.2			
Operating Voltage (V)	10-30			
Operating Voltage Ripple (%)	10			
Load Current Ia (mA) max	250			
Residual Current Ir (mA)	0.001			
No-Load Current (mA)	15			
Voltage Drop Ud (V)	2.5			
Internal Resistance Ri (K)	4.7			
Temperature Drift S ($\mu\text{m}/\text{K}$)	± 10			
Switching Frequency (Hz)	500			
Output Polarity	PNP		NPN	
Output Function	A=NO	U=NO+NC	A=NO	U=NO+NC
Connection Diagram	1	3	2	4
Short Circuit Protection	yes	yes	yes	yes
Status Indication	LED (see ordering code)			LED (see ordering code)

Block Housing Flat Profile SN01 Version 3 Wire D.C. Standard Switching Distance		
Technical Data	Type : SN01X05	
	DC Operating Voltage	
Housing Material	Aluminium Casting , Anodised	
Environmental Protection	IP67	
Mounting Position	Optional	
Operating Temperature (deg.C)	-25 to +70	
Connection	Encapsulated Oil Resistant Cable	
Cable Length (mm)	2000 or 5000	
Conductor Cross Section (mm ²)	0.34	
Sensing Distance Sn (mm)	5	
Switch Point Hysteresis H (mm)	0.5	
Repeat Accuracy (mm)	0.2	
Operating Voltage (V)	10-30	
Operating Voltage Ripple (%)	10	
Load Current Ia (mA) max	250	
Residual Current Ir (mA)	0.001	
No-Load Current (mA)	15	
Voltage Drop Ud (V)	2.5	
Internal Resistance Ri (K)	4.7	
Temperature Drift S ($\mu\text{m}/\text{K}$)	± 10	
Switching Frequency (Hz)	500	
Output Polarity	PNP	
Output Function	A=NO	U=NO+NC
Connection Diagram	1	3
Short Circuit Protection	yes	yes
Status Indication	LED (see ordering code)
